## Slave Cylinder For The V-6 5-Speed Getrag Transmissions

by: Paul Vargyas

Since the demise of the original, durable and long lasting GM Getrag steel slave cylinders, the aftermarket replacement cast iron Getrag slave cylinders have proven to be very low quality. This all new aluminum Getrag slave cylinder from Rodney Dickman is top quality. It features a double seal on the piston, and includes a new push rod and bleeder valve. The cast aluminum housing will not corrode like steel or cast iron. Plus, Rodney will soon be offering rebuilding parts for these slave cylinders. This new product sells for \$79.95, which is generally less than the poor quality cast iron replacements. This new slave solves most clutch release problems.
