

Paul's Product Review

OEM Type Isuzu Shift and Select Cables

by: Paul Vargyas

Rodney Dickman now offers OEM type shift and select cables for the '85-'88, 4-cylinder manual transmission Fiero.

Some of the features of these cables include:

- Black sheathing just like OEM
- OEM style black foam insulation
- Exact replacement (non adjustable)

Note: The select cable is the one that provides the side to side motion of the gear shift; the shift cable provides the front to back movement.

These cables are the correct length and are ready to install. There is no guess work involved. Both cables include a new ball stud. Many competitors expect you to use the old, rusty and worn (most likely now undersized) ball stud from your old cable. This will leave you with looseness on that end of the cable. The shift cable is \$89.95/each and the select cable is \$84.95/each. For full details on these cables or many more products for your Fiero, visit Rodney's website at www.rodneydickman.com.
