Getrag 5-speed Select Cable

by: Paul Vargyas

The V-6 5-speed select cable has not been available from GM for several years now. Most aftermarket cables available today have proven to be very poor quality. They also have little or no heat shielding. Heat is the single biggest factor in Fiero manual transmission cable failures. Over time heat makes the inner cable swell making the cable hard to move. Original GM cables had a thick multilayer heat shielding on them. Rodney Dickman's replacement cables also feature a multilayer heat shielding wrap on them, much like original GM OEM cables. They also feature black sheathing and include a new chrome plated ball stud, not provided by other cable suppliers. This cable is not a generic adjustable type. It is made to fit and is ready to install. The OEM select cable sold by GM (before it was discontinued) was over \$100.00 wholesale. This cable is priced right at only \$89.95.
