

Paul's Product Review

Fiero Glove Box

by: Paul Vargyas

We are finally able to provide the Fiero community with a brand new, thermoformed ABS plastic glove box that fits all year Fieros. This glove box has been in the design stage for almost two years. Modeled after the very popular aftermarket Fiero glove box that was discontinued several years ago, the design and functionality has been improved by adding a lock, cup holders and stronger dual retention straps. This improved aftermarket glove box has been designed to answer all your Fiero storage needs. Symmetrical in looks with the instrument cluster and painted to match the color of the top of the stock dash (color choices include: charcoal gray, dark tan and beechwood). This glove box will be a welcome improvement to your Fiero!

Two 3" diameter cup holders are built into a "map pocket" area inside the glove box lid. This glove box is built with a continuous steel piano hinge, latch/lock assembly with two keys and two twisted steel retainer straps. You can use the "map pocket" under the cup holders for maps, registration paperwork, insurance cards, CD's, etc. or use the deep cup holders for almost any size beverage container. The interior volume measures 15" x 5" x 5" providing room for all those accessories, electronic "gadgets", flashlight or (?).

These are now being built and assembled in the US, and are now available to ship. Comes with attachment hardware and installation instructions (note: holes will need to be drilled for the mounting fasteners).

The cost is \$179.00 with free shipping for NIFE members to any point in mainland US. To order, send an email to: paulvargyas@comcast.net; be sure to include your color choice. I will advise you when they are ready to ship. Check, MO or PayPal accepted.
