

Paul's Product Review

LED Lighting for your Fiero

by: Paul Vargyas

Top Line Group Automotive Accessories (TLG) has several applications for the Fiero to update some of your lighting to modern LEDs! The LED conversion kits come in dome light conversion kit, interior floor light kit, exterior side marker kit, plus more LED applications. The picture shown is of the Marker Light conversion. TLG will supply a brand new set of 4 marker lights, which are already converted to LED's for a price of \$155.00. This is for any markers found on the '86-'88 GT, the '88 Coupe and Formula, the '87 Coupe, or any the ribbed molding coupes. These are Plug 'N Play with your existing wiring harness at all four corners.

Starting with brand new marker light housings from The Fiero Store in Connecticut, TLG then modifies a special flexible LED strip product from GTR Lighting and installs it into the new marker housings. They finish off the product by installing plug and play "194/168" style bulb connectors on the end so all you have to do is plug it in! Also they use high quality rectifiers in the construction of the front marker lights to ensure they flash with the blinkers when the headlights are turned ON or OFF. And, this product is made in the USA!

All information on the markers, the dome light and courtesy light conversion and more Fiero LED conversion products can be found at: www.TLG-auto.com.
